			US 2004-543184P	P 20040210

AB One aspect of the invention is a method of controlling target living
 species with an active ingredient over an extended period of time. The
 active ingredient is sorbed into colloidal clay.
 Next, a polymer pellet recalcitrant to release of the
 active ingredient is loaded with the sorbed colloidal
 clay. Finally, the loaded polymer pellet is formed into a
 barrier, which is adapted to be placed at a location for controlling a
 target living species. Another aspect is a barrier for controlling a
 target living species. The formed barrier contains polymer pellets loaded
 with colloidal clay sorbed with an active ingredient
